

YD Yeah Sport

Professional Surfing Equipment Manufacturer

ABOUT YD YEAH SPORT

Dongguan YD Yeah Sport Co., Ltd. is a leading manufacturer of premium surfing equipment, committed to empowering water sports enthusiasts to achieve peak performance.

Our story began when founder Ken Liu, refusing to settle for the paddles available on the market, set out to redefine performance through pioneering design. Driven by that same relentless spirit of innovation, we have since expanded into a comprehensive range of high-performance gear—including paddles, inflatable boards, sails, wings, and hydrofoils — each engineered to support users from beginner to professional levels. We embrace a ‘water-first’ philosophy—every design stems from real use cases and is tested in the very environments our customers ride.

Over the years, we have built a highly specialized team with more than a decade of expertise in the surfing equipment industry. This deep technical knowledge enables us to integrate advanced technologies into our manufacturing processes, ensuring every product not only meets but exceeds international quality standards. Through rigorous real-world testing, we guarantee the durability and safety that have made us the trusted choice of surfing schools and competitive athletes worldwide. Today, our products are trusted by enthusiasts and professionals across Southeast Asia, North America, and Europe, supported by a growing network of local distributors and brand ambassadors.

Beyond building equipment, we are a community united by a shared passion for water sports. Our vision is to foster a global culture of adventure and ocean respect, inspiring every individual to write their own story upon the waves.

Voyager

Voyager is an inflatable sail designed to replace conventional rigid sails, delivering a featherlight, highly portable solution without sacrificing performance. Its innovative inflatable construction dramatically reduces weight while preserving precise control and direct wind response. Every gust is transferred cleanly to the sail, allowing riders to stay connected and in control.

Built with high-quality fabric and a reinforced bladder, Voyager offers excellent durability, instant responsiveness, and smooth, stable glide in a wide range of conditions. A versatile mounting system allows the sail to be attached to virtually any board using either secure straps or a compatible base, making wind-powered riding more accessible, flexible, and travel-friendly than ever.

Pioneer & Expedition

Pioneer and **Expedition** are compact kayak sails designed to enhance all-round performance for kayaking and other small watercraft. Suitable for use with kayaks, canoes, small boats, and inflatable equipment, they allow riders to harness wind power and travel farther with less effort.

The round and elliptical sail designs efficiently capture wind, providing consistent forward drive and making long-distance paddling more relaxed and enjoyable. Their compact structure ensures quick installation and easy removal, with minimal setup required on the water.

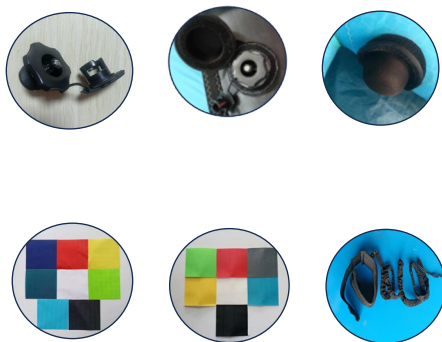

A transparent viewing window maintains clear forward visibility while sailing, enhancing awareness and safety. Constructed from high-quality, durable materials, Pioneer and Expedition are built to withstand repeated use while remaining lightweight and reliable.

Pelican

Pelican is our original all-round inflatable wing and remains a core model in the lineup thanks to its robust, well-balanced design. Refined over time, it now features a reinforced bladder and an efficient SUP valve, improving durability, inflation speed, and overall performance.

Available in a wide range of sizes, Pelican suits riders of all weights and ability levels. Its forgiving handling and stable power delivery create a smooth, comfortable riding experience—making it an ideal choice for beginners and a dependable option for everyday sessions. With strong low-end power, Pelican performs exceptionally well in lighter wind conditions, allowing riders to get on the water with minimal effort and enjoy longer, more relaxed sessions.

Albatross

Albatross is an updated inflatable wing featuring a redesigned leading edge built from multiple smaller bladder segments. This segmented construction forms a cleaner, more streamlined profile, significantly reducing wind drag while improving handling precision and control.

The refined leading edge allows the wing to respond more smoothly to rider input, delivering a lighter, more efficient feel in motion. Integrated transparent viewing windows enhance forward visibility, helping riders maintain better awareness while riding. Optimized for wave riding and downwind cruising, Albatross offers the control, efficiency, and flow needed to chase swell and connect runs with confidence.

Egret

Egret is an inflatable wing featuring a redesigned canopy constructed from multiple smaller fabric panels. This structure allows for a bold tri-color layout, giving the wing a distinctive and dynamic visual presence on the water. Beyond aesthetics, the multi-panel construction improves load distribution across the canopy.

Combined with advanced triple-yarn ripstop fabric, Egret delivers excellent tension control, durability, and responsive freestyle performance. A reinforced PVC bladder further enhances stability and efficiency, helping the wing remain composed and powerful in stronger wind conditions while maintaining smooth forward drive.

Seagull

Seagull features a refined design with removable rigid carbon-fiber handles mounted on the center strut. Compared to soft handles, the rigid construction delivers precise handling and better maneuverability. After deflation, the handles can be easily removed, significantly improving portability and making packing and transport more convenient.

To further enhance performance in demanding conditions, several reinforced carbon sticks are integrated along the bottom of the canopy. This structure increases overall rigidity, reduces vibration, and keeps the wing stable and composed during high-speed cruising in strong wind.

Cormorant

Cormorant is designed with a thicker, reinforced bladder, allowing it to operate at higher internal pressure and deliver significantly greater load capacity than standard wings. Both the leading edge and center strut are engineered to handle heavier forces, providing solid support and consistent power.

This robust structure makes Cormorant especially well suited for long-distance cruising and heavier riders, where stability and endurance matter most. Even during extended sessions or prolonged exposure to marine environments, the wing maintains its performance without degradation. Durable, dependable, and efficient over time, Cormorant is an ideal choice for rental operations as well as riders who spend long hours on the water refining their skills.

Peregrine

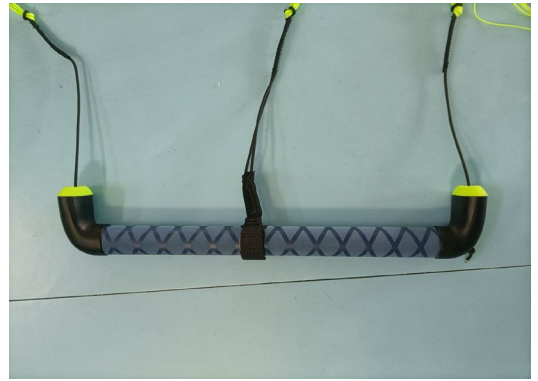

Peregrine features a reduced wingspan design that improves overall riding efficiency while keeping the wingtips clear of the water. This compact outline minimizes unwanted contact, delivering a cleaner, more fluid feel on the water. Designed with control as its core strength, Peregrine offers a smooth, comfortable, and highly precise riding experience. Its balanced structure and inherent stability allow riders to stay fully focused on wave reading and body movement, rather than managing the wing.

Lightweight yet performance-oriented, Peregrine maintains excellent stability across a wide range of wind strengths and conditions, providing confident control during acceleration and transitions. Whether carving waves or cruising downwind, Peregrine delivers the control and reliability riders need to ride with confidence.

Swift

Swift redefines wind-powered adventure with an ultra-lightweight and highly portable para wing designed for riders who value freedom and convenience. Unlike traditional inflatable wings, Swift requires no inflation and can be deployed instantly whenever the wind arrives. Its compact folding design makes it easy to carry, store, and travel with, while delivering efficient wind capture and responsive control on the water. Built with a premium carbon fiber handle and a high-strength control line system, Swift combines lightweight performance, durability, and reliability for effortless exploration wherever your journey takes you.

HYDROFOILS

Orca

Named after the strongest whale in the ocean, **Orca** is designed for experienced kite foilers who demand strength, stability, and precision at speed. Purpose-built for kite-powered riding, its streamlined profile delivers powerful acceleration and efficient glide, enabling confident riding from offshore swells to the shore-break.

Constructed with lightweight carbon front and rear wings, Orca balances maximum rigidity with responsive control. A reinforced fuselage-to-mast connection eliminates unwanted movement, ensuring a solid, predictable feel under heavy load.

Designed for riders using rigid sails in downwind conditions, **Marlin** is engineered with a singular focus: exceptional stability under sustained power.

Its balanced structure keeps the board and foil composed and predictable even when fully lifted above the water, minimizing wobble and preserving control at speed. Optimized for strong wind environments, Marlin delivers a smooth, confident foiling experience, allowing riders to fully harness sail-driven speed without compromise.

Marlin

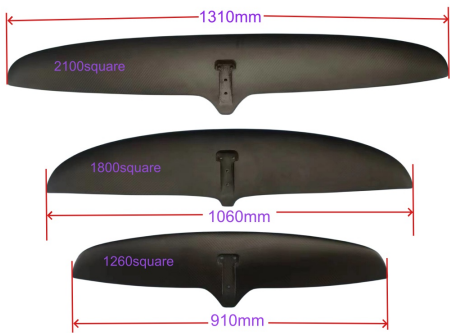

HYDROFOILS

Dolphin

Designed specifically for dockstart and pump foiling beginners, **Dolphin** removes the biggest barrier to entry — the start. With optional oversized front wings, Dolphin generates early and consistent lift, allowing riders to experience the joy of pump foiling without weeks of frustrating practice. Instead of struggling to get airborne, you can focus on balance, rhythm, and flow from your very first sessions.

The unique concave rear wing tip enhances glide and lift efficiency, helping maintain speed with minimal pumping effort. Combined with its streamlined profile, Dolphin delivers exceptional tolerance and stability, making it forgiving during imperfect foot placement, uneven power, or timing errors. As the most beginner-friendly foil in the YD lineup, Dolphin is built to accelerate progression, boost confidence, and make every session more rewarding.

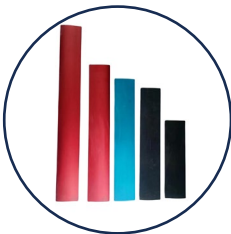

Mako

Designed for riders competing at the highest level, **Mako** is built to deliver uncompromising performance where every fraction of a second matters. The ultra-thin profile minimizes hydrodynamic drag, allowing explosive acceleration off the start line and sustained efficiency at top speed. Compared to conventional foils, Mako responds instantly to rider input, providing precise, predictable control throughout high-pressure race conditions.

Constructed entirely from high-modulus carbon fiber, each component is optimized for maximum weight reduction without sacrificing structural feedback. This results in a foil that feels exceptionally light underfoot while maintaining the rigidity required for aggressive pumping, tight course adjustments, and high-speed transitions.

BOARDS

Breeze

Breeze is a versatile inflatable board designed for relaxed cruising, compatible with both inflatable and rigid sails. Easy to handle and effortless on the water, it delivers a smooth, enjoyable riding experience for everyday sessions.

With its compact 10'6"×32"×6" inflatable design, Breeze packs neatly into a backpack, making transport and storage simple — ideal for travel or spontaneous rides. It comes as a fully equipped package, including a pump, 3-piece paddle, fins, board bag, leash, and repair kit. Everything you need is included, so you can head straight to the water without any extra purchases.

Nautilus is an inflatable board specifically designed for foiling, featuring an integrated foil plate that ensures a secure, efficient, and precise connection between the board and foil.

Its refined, streamlined shape minimizes air and water drag, enabling earlier lift, smoother acceleration, and stable gliding—making foiling easier and more intuitive, especially for riders developing their skills. The lightweight inflatable construction allows for easy handling and responsive control on the water, while the high-traction anti-slip foam deck provides confident footing and comfort throughout every session.

Nautilus

BOARDS

Gravity

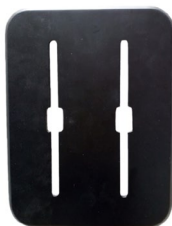

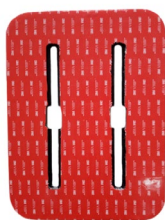

Gravity is designed to make pump foiling more accessible with an ultra-lightweight EPS foam core and carbon construction. By reducing overall weight, it lowers the entry barrier for beginners while maintaining excellent strength and durability for long-term performance. The streamlined nose design minimizes water resistance during takeoff, helping riders achieve smoother starts with less effort. Equipped with an anti-slip traction pad for enhanced stability and control, and a universal foil mounting system compatible with various foil setups, Gravity delivers a balanced combination of lightweight performance, durability, and versatility for riders at every stage of progression.

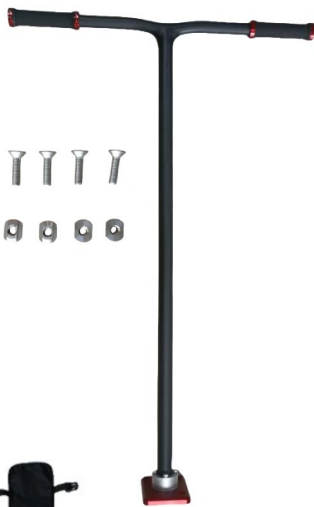

Magnet is designed for riders who seek stability, efficiency, and freedom on the water. Featuring an EPS foam core combined with carbon construction, this wing foil board delivers an excellent balance of lightweight performance and structural durability. Its larger volume and optimized shape provide enhanced stability and effortless glide, making it ideal for long-distance cruising and extended sessions with reduced fatigue. The refined board outline improves water flow and takeoff efficiency, while the full traction pad ensures secure footing and comfortable control during every ride. Equipped with a universal foil mounting system and supplied with a dedicated board bag, Magnet offers outstanding compatibility, portability, and convenience for riders exploring new waters.
